

LIFE SCIENCES ALLIANCE

Your partner network for validated SAP S/4HANA solutions in the pharmaceutical and medical technology midmarket

SAP S/4HANA (new) implementations and transformations in the life sciences require experienced SAP specialists as well as pragmatic, cost-optimised solutions and services from a single source. For this reason, the **All for One Group** and the **DHC Consulting Group** bundled their SAP Life Sciences experience and industry portfolio in September 2020. The newly founded **Life Sciences Alliance (LSA)** offers pharmaceutical and medical technology companies a harmonised approach for the implementation and transformation of SAP S/4HANA with integrated validation.

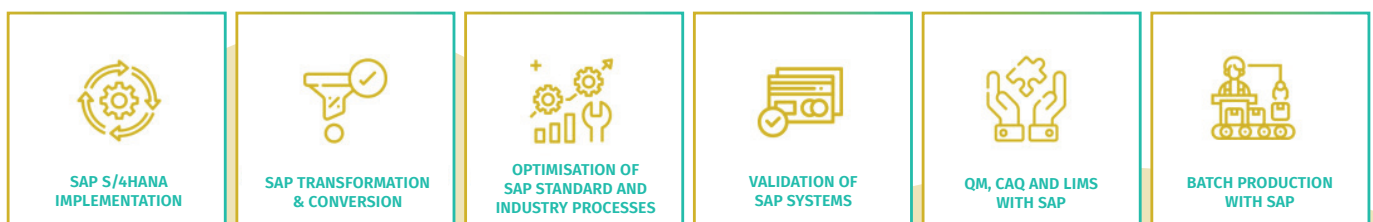

This makes us not only a reliable and experienced partner for all services related to the (new) introduction or transformation of SAP S/4HANA, but can also provide you with optimal strategic and long-term support.

THE PARTNERS OF THE LIFE SCIENCES ALLIANCE

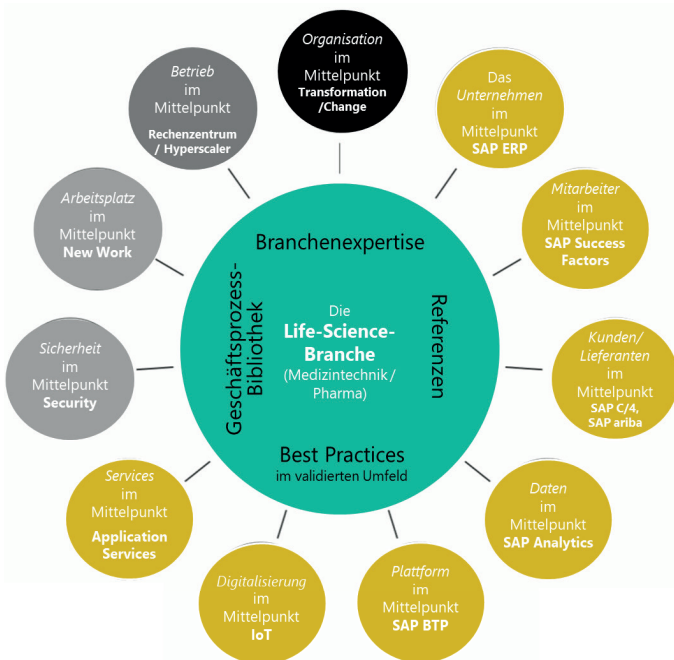

KEY TOPICS OF THE LIFE SCIENCES ALLIANCE

OUR SERVICE PORTFOLIO

With our Alliance we are not only qualified for SAP ERP, but also for all other topics in the life sciences as your competent partner.

OUR INDUSTRY EXPERTISE

The Life Sciences Alliance is a team of experienced experts who have managed a wide range of projects around the globe and are well versed in the regulated environment. Our consultants are very familiar with terms such as FDA, EMA, GMP, MDR and validation, but also with the topics of digitalization, globalization and standardization in the life sciences industry.

As our clients are important players in the regulated environment, we are familiar with the challenges, the regulatory requirements and the growing customer expectations companies in the pharmaceutical, medical device and biotechnology have to face. We know that business models are changing due to greater patient integration and personalization of medical applications and a stronger service orientation for high-tech medical products.

Business processes must be adapted, comprehensive supply chain and compliance concepts must be established and continuously expanded. Workflows must be made more efficient and processes automated. In addition, an end-to-end network with suppliers, partners, customers and authorities must be created.
